

Happy FATHER'S DAY

"Dust Free" Location in May

Furncan office really stood out from the rest in last month inspections. It was completely dust free ☺

Everything looked absolutely clean and fresh. And everyone is very pleased with [Genith's](#) work. Congratulations!!!!!!

Best Employee of the month

[Debbie Estey](#) for her amazing work at Saint John Airport and the dedication she puts everyday to make sure the terminal is impeccable. Your hard work does not go unnoticed!

We will be selecting the **Best Improved Location** in our inspections this month, along with the **Best Employee of the Month**. Our focus in June will be: fingerprints in door frames, around light switches, marks and coffee stain in walls (specially behind garbage cans).

Keep up the great work everyone!

Keyboard Cleaning 101

When was the last time you cleaned your keyboard? For something most of us use (and eat over) every single day, there's very little thought put into keeping our tech products clean. Below are a few tips and tricks we've found to help keep your keyboard in tip top shape.

Compressed Air

Consider this is your new favorite cleaning supply. Compressed air (also known as canned air) can be found at your local drugstore and will blow last night's chip crumbs right out of your keyboard. Plus, it sounds pretty cool.

Microfiber Cloth

A microfiber cloth is designed to pick up dirt and dust much better than a napkin or the corner of your t-shirt. Swipe it over the keys every once in a while. This can also be found at convenience stores, most likely in the eyeglasses section.

Post-Its

Take that little yellow square of paper from your desk and slide the sticky part into the key crevices. You'll be surprised what it picks up!

To: Our Strip & Wax Team for the amazing work done at Irving Equipment. Great results!!!!

To: Cecil for the deep cleaning performed at Saint John Toyota in their garage. The Service & Parts Team was very pleased!
